
CONTENTS

Dedication	iii
Preface	v
Foreword	vii
Acknowledgments	xvii

Chapter 1 Introduction	1
Introduction	1
Electronic Packaging	1
Information Processing Tools	2
Hierarchy of Packaging	6
Packaging Nomenclature	7
Product Categories	9
Suggested Reading	12
References	12
Exercises	13

Chapter 2 Substrate and Laminate Technologies	15
Introduction	15
Ceramic Substrate Technologies	15
Thick Film Technology	15
Thin Film Technology	19
Printed Wiring Board Technology (Conventional)	22
Additive Process	23
Subtractive Process	23

Flexible Laminate Circuits	36
Design	36
Flex Carriers	37
High-Density Printed Wiring Board Technologies	41
Surface Laminar Circuitry	42
Laser Microvia Technology	44
Surface Finishes	47
Solder Coatings	48
Organic Solderability Preservatives	49
Electroless Nickel-Immersion Gold (ENIG)	49
Immersion Silver	52
Immersion Tin	53
Suggested Reading	56
References	56
Exercises	58

Chapter 3 First-Level Packaging—Packaging and Component Technologies 59

Introduction	59
Ceramic Packages	60
Plastic Packages	60
Anatomy of a Package	61
Lead Frame	62
Die Attach	64
On Chip Interconnect	65
Flip Chip Bonding	69
Mechanical and Environmental Protection	73
Surface or Termination Finish	74
Insertion Mount Ledged Packages	76
Surface Mount Packages	77
Perimeter Ledged/Termination Surface Mount Packages	78
Limitations of Ledged Packages	82
Flip Chip on Laminate	82
Ball Grid Array Technology	83
Chip Scale Packaging	90
MEMS Packaging	102

Advanced Packaging	106
System in Package/Die Stacking	106
Package Stacking/Package on Package	109
System-on-Chip	111
System-on-Package	112
Low k and High k Dielectrics in Device Packaging	114
Suggested Reading	117
References	117
Exercises	121

Chapter 4 Package-to-Board Interconnection 123

Introduction	123
Tin–Lead System	123
Cu–Sn System	126
Sn–Ni System	128
Sn–Au System	129
Tin–Lead–Silver Alloy System	131
Lead-Free Interconnection Alloys	132
Sn–Ag Alloy	133
Sn–Bi Solder	133
Sn–Cu Alloy	134
Au–Sn Solder	135
Sn–In Solder	136
Ternary Alloys—Tin–Copper–Silver Alloys	136
Super Cooling	137
Solder–Substrate Interface Structure	140
Interface Nickel–Gold Surface	141
Kirkendall Voiding	141
Adhesive Interconnections	142
Isotropic Conductive Adhesives	143
Anisotropic Conductive Adhesives	144
Intrinsically Conductive Adhesives	145
Interconnection Process/the Assembly	146
Wave Soldering	146
Fluxes	147

Surface Mount Assembly	148
Stencils	149
Insertion Mount and Surface Mount Technologies	
in Perspective	161
Repair	162
Rework	164
Suggested Reading	166
References	166
Exercises	168

Chapter 5 System Packaging 171

Introduction	171
Motherboard	173
Daughter Cards/Expansion Cards	173
Connectors	174
Connector Contact Surfaces	179
Connector Housings	181
Cable Assemblies and Cables	182
Box Assembly	184
Suggested Reading	186
References	186
Exercises	187

Chapter 6 Reliability of Electronic Packaging 189

Introduction	189
Quality, Reliability, and Assurance	190
Product Assurance	191
Qualification	191
Reliability Statistical Distributions	192
Normal Distribution	195
Log-Normal Distribution	196
Exponential Distribution	197
Weibull Distribution	197
Reliability Tests and Qualification	201
Thermomechanical Stresses	205
Thermal Cycling	207

Thermal Shock	212
High Temperature Storage	212
Failure Prediction or Estimation Models	222
Solder Fatigue Model	222
Humidity Models	224
Conductive Anodic Filament Model	225
Suggested Reading	227
References	227
Exercises	228

Chapter 7 Failure Modes and Mechanisms 231

Introduction	231
Design-Related Exposures	233
Manufacturing Defects and Failures	237
Laminate or PWB Failures	237
Conductive Anodic Filaments	243
Package Failures	246
Interconnection Failures	250
Corrosion	253
Electromigration	253
Intermetallics	258
Copper–Tin Intermetallics	259
Nickel–Tin Intermetallics	260
Gold–Tin Intermetallics	261
Silver–Tin Intermetallics	262
Lead (Pb)-Free Solders	263
Mechanical Load Failures	267
Tin Whiskers	269
Suggested Reading	272
References	273
Exercises	274

Chapter 8 Reliability Enhancements 277

Introduction	277
Design Methodologies	278
Environmental	278

Product Attributes	278
Components	279
Printed Wiring Board Design	280
Physical Enhancements	281
Encapsulants, Underfills, and Coatings	281
Encapsulants	281
Underfills	282
Conformal Coatings	293
Product Related	295
Materials Related	295
Process	295
Suggested Reading	298
References	299
Exercises	300

Chapter 9 Emerging Trends in Packaging 301

Introduction	301
Emerging Trends	303
Design Convergence	303
Wafer/Semiconductor	304
Package Level Integration	305
Finer Pitch Packaging	306
System in Package	307
Package-on-Package and Package-in-Package	308
System-on-Package	310
System-on-Chip	310
Laminate Technology	311
Printed or Printable Electronics	312
System Level Packaging	312
Nanomaterials and Nanotechnology	312
Storage Technology	314
Battery Technology/Energy Sources/Solar Cells/Fuel Cells	314
Display Technology: the OLEDs and Flexible Rollable Displays	315

Sensors	317
Automotive Electronics	317
Mobile Electronics	318
Medical Electronics	318
Wearable Electronics	319
Biodegradable Electronics	319
Recyclable Electronics	321
Failures and Assembly Defects	324
Suggested Reading	324
References	324
Exercises	326
<hr/>	
Appendixes	327
Abbreviations	327
Glossary of Terms in Electronic Packaging	333
Select Properties of Materials of Importance in Electronic Packaging	349
Standards	353
Source Books	355
<hr/>	
Author Biography	357
<hr/>	
Index	359
